LinkedIn: <https://www.linkedin.com/in/anthony-nebenmor> | GitHub: <https://github.com/Nebenmor>
Location: Lagos State, Nigeria

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer with proven experience architecting and deploying scalable web applications across modern technology stacks. Specialized in Python/FastAPI and Node.js/Express backend development with React/TypeScript frontends, delivering robust REST APIs, optimized database solutions, and secure authentication systems. Architected 80% of backend infrastructure for enterprise property management platform serving property managers, residents, and maintenance teams with sub-200ms response times. Built fintech-grade systems including a cross-border payment processor with double-entry bookkeeping and idempotency controls, and a personal finance tracker with real-time data visualization. Demonstrated expertise in improving system performance by 40%, reducing development time by 30%, and maintaining 95%+ test coverage across production environments. Seeking opportunities to drive technical innovation and deliver high-impact solutions in collaborative, agile teams.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

Backend: FastAPI, Node.js, Express.js, RESTful API development, WebSocket (Socket.IO), JWT Authentication, Alembic migrations, Webhook architecture, Clean Architecture, Domain-Driven Design, HMAC signature verification, idempotency middleware

Databases: PostgreSQL, MongoDB, MySQL, SQLAlchemy ORM, Mongoose ODM, database design and optimization, schema design, indexing, query optimization, double-entry bookkeeping schemas

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, Material UI, Framer Motion, React Hooks, React Router, Context API, React Query, React Hook Form, Recharts, responsive design

Development Tools: Git, Postman, VS Code, Figma, Docker, Docker Compose, Vite, Swagger/OpenAPI, CI/CD (Vercel, GitHub Actions)

Testing: Pytest, unittest, Jest, Supertest, Integration Testing, API Testing, 95%+ test coverage

Additional: Agile/Scrum methodologies, Cross-functional collaboration, System architecture, Performance optimization, MinIO file storage, Twilio SMS integration, Zod validation

PROFESSIONAL EXPERIENCE

Full-Stack Developer

October 2025 - Present

Smash Technology

- Build full-stack solutions using FastAPI, Express.js, React 19, PostgreSQL, and MongoDB with clean, domain-driven architecture.
- Deliver real-time messaging backend with WebSocket and React frontends achieving sub-200ms response times and 95+ Lighthouse scores.
- Design 15+ table normalized schemas with strategic indexing and Alembic migrations — 40% query performance improvement.

- Implement JWT auth with RBAC, bcrypt hashing, Joi/Pydantic/Zod validation, and rate limiting.
- Maintain 95%+ test coverage with Pytest and Jest, collaborating across backend, QA, and DevOps via CI/CD pipelines.

Full-Stack Developer (Contract)

June 2025 - August 2025 (Remote)

Xcel/sz

- Built end-to-end web solutions using React, TypeScript, Express.js, and REST APIs.
- Designed backend services with secure authentication and authorization mechanisms.
- Participated across frontend, backend, QA, and DevOps pipelines with CI/CD workflows.

Frontend Developer

November 2024 - April 2025

Prodigy InfoTech

- Built pixel-perfect responsive UIs with React.js, TypeScript, and Tailwind CSS.
- Created reusable components reducing development time by 30%.
- Integrated RESTful APIs for dynamic data fetching and display.

Full-Stack Developer

June 2023 - November 2024

Holberton School (ALX)

- Built end-to-end web solutions bridging React frontends with backend infrastructure.
- Implemented high-performance data fetching and caching strategies.
- Built RESTful APIs with error handling, validation, and performance monitoring.

KEY PROJECTS

PayRoute — Cross-Border Payment Processing Service

Technologies: Node.js, Express.js, PostgreSQL, React, Vite, Tailwind CSS, Docker, Jest, Supertest

- Built full payment lifecycle (FX quote locking, balance debit, provider submission, webhook settlement) within atomic PostgreSQL transactions — containerized with Docker Compose.
- Designed double-entry bookkeeping ledger with SELECT FOR UPDATE overdraft prevention and a ledger_balance_check reconciliation view.
- Implemented idempotency middleware and HMAC-SHA256 webhook verification with raw-body-first event persistence to survive downstream crashes.
- Built React frontend with live FX preview, paginated transaction list with status filters, and ledger entry timeline view.

GitHub: <https://github.com/Nebenmor/PayRoute>

Flo — Personal Finance Tracker

Technologies: React 18, Tailwind CSS, Recharts, Vite, localStorage

- Built a finance tracker with Recharts donut/bar charts, animated budget progress bars, and over-budget alerts.
- Managed all state via a custom useFinanceData hook — transactions, budgets, derived financials, localStorage persistence — no external state library.
- Implemented full transaction management with add/delete modal, search, multi-filter, and real-time budget editing.
- Responsive layout — sidebar on desktop, bottom nav on mobile — using CSS Grid auto-fit/minmax with a distinctive dark mint design system.

Property Management System - Enterprise Backend Platform

- Technologies:** FastAPI, Python, PostgreSQL, SQLAlchemy, Alembic, JWT, Pytest
- Architected scalable backend for property managers, residents, and admins with RBAC.
 - Designed 12+ table normalized schema with strategic indexing and foreign key relationships.
 - Built RESTful API for property profiles, maintenance requests, billing, and resident records.
 - Achieved sub-200ms response times through query optimization and strategic indexes.

SwiftTalk - Real-Time Chat Application

- Technologies:** React 19, TypeScript, Node.js, Express.js, Socket.IO, MongoDB, JWT, Tailwind CSS
- Built real-time chat platform with Socket.IO, typing indicators, read receipts, and file sharing up to 10MB — 99.9% uptime.
 - Architected backend with JWT auth, rate limiting, and indexed MongoDB queries achieving sub-100ms response times.
 - Developed React frontend with friend management, online status indicators, and mobile-first responsive design.
- GitHub:** <https://github.com/Nebenmor/swift-talk> | **Live:** <https://swifttalk-chat.vercel.app>

EDUCATION & CERTIFICATIONS

Software EngineeringNovember 2024

Holberton School (ALX), San Francisco

Relevant Coursework: Data Structures & Algorithms, System Engineering, Web Development, Database Management, DevOps

AI for DevelopersJune 2025

Holberton School (ALX)

Relevant Coursework: Machine Learning Integration, AI-powered Development Tools, Natural Language Processing

Bachelor's Degree (B.Sc.) in BiochemistryJune 2019

University of Benin

Grade: 2:1 | **Skills:** Analytical thinking, Research methodology, Problem-solving

LANGUAGES

English: Fluent (Professional working proficiency)

KEY ACHIEVEMENTS

- Contributed 80% of backend architecture for a production property management system — sub-200ms response times.
- Built fintech-grade payment platform with double-entry bookkeeping, idempotency layer, and HMAC webhook verification.
- Reduced development time by 30% through reusable component architecture across frontend and backend.
- Improved performance by 40% through database optimization, strategic indexing, and query tuning.
- Maintained 95%+ test coverage with Pytest and Jest across production environments.
