PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years of production experience building scalable web applications, fintech systems, and real-time platforms across Python/FastAPI and Node.js/Express backends with React frontends. Built FlowSpace, a production-grade multi-tenant SaaS platform with async PostgreSQL, real-time WebSocket sync, Celery background workers, Redis caching, and resilient webhook delivery — deployed end-to-end with a full React dashboard. Built PayRoute, a cross-border payment processor with double-entry bookkeeping, idempotency controls, and HMAC-verified webhooks. Built JobSense, a full-stack AI application on a RAG architecture — Groq API (Llama 3.3 70B), FastAPI backend, React 18 frontend with animated SVG score ring, and async PostgreSQL — deployed end-to-end. Demonstrated expertise in improving system performance by 40%, maintaining 95%+ test coverage, and delivering production-ready solutions in collaborative, agile environments.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

Backend: FastAPI, Node.js, Express.js, RESTful API development, WebSocket (Socket.IO), JWT Authentication, Alembic migrations, Webhook architecture, Clean Architecture, Domain-Driven Design, HMAC signature verification, idempotency middleware

Async & Queue Systems: Celery, Redis (caching, broker, rate limiting), background job processing, exponential backoff retry, workspace-scoped cache invalidation

Databases: PostgreSQL, MongoDB, SQLAlchemy ORM, Mongoose ODM, database design and optimization, schema design, indexing, query optimization, double-entry bookkeeping schemas, full-text search (tsvector, GIN index)

Frontend: React.js, Next.js, TypeScript, TanStack Query, Tailwind CSS, Material UI, React Hooks, React Router, Context API, React Hook Form, Recharts, responsive design

AI & Integrations: Groq API (Llama 3.3 70B), RAG architecture (retrieval-augmented generation), structured LLM output extraction, Pydantic v2 schema enforcement, pdfplumber PDF extraction, AI for Developers certified (Holberton/ALX), Resend email API, Twilio SMS, MinIO file storage

Development Tools: Git, Postman, VS Code, Figma, Docker, Docker Compose, Vite, Swagger/OpenAPI, CI/CD (Vercel, GitHub Actions)

Testing: Pytest, Unittest, Jest, Supertest, Integration Testing, API Testing, 95%+ test coverage

Additional: Agile/Scrum methodologies, Cross-functional collaboration, System architecture, Performance optimization, Zod validation

PROFESSIONAL EXPERIENCE

Full-Stack Developer

October 2025 - June 2026

Smash Technology

- Built full-stack solutions using FastAPI, Express.js, React 19, PostgreSQL, and MongoDB with clean, domain-driven architecture.
- Delivered real-time messaging backend with WebSocket and React frontends achieving sub-200ms response times and 95+ Lighthouse scores.
- Designed 15+ table normalized schemas with strategic indexing and Alembic migrations — 40% query performance improvement.
- Implemented JWT auth with RBAC, bcrypt hashing, Joi/Pydantic/Zod validation, and rate limiting.
- Maintained 95%+ test coverage with Pytest and Jest, collaborating across backend, QA, and DevOps via CI/CD pipelines.

Full-Stack Developer (Contract)

June 2025 - August 2025 (Remote)

Xcel/sz

- Built end-to-end web solutions using React, TypeScript, Express.js, and REST APIs.
- Designed backend services with secure authentication and authorization mechanisms.
- Participated across frontend, backend, QA, and DevOps pipelines with CI/CD workflows.

Frontend Developer

November 2024 - April 2025

Prodigy InfoTech

- Built pixel-perfect responsive UIs with React.js, TypeScript, and Tailwind CSS.
- Created reusable components reducing development time by 30%.
- Integrated RESTful APIs for dynamic data fetching and display.

Full-Stack Developer

June 2023 - November 2024

Holberton School (ALX)

- Built end-to-end web solutions bridging React frontends with backend infrastructure.
- Implemented high-performance data fetching and caching strategies.
- Built RESTful APIs with error handling, validation, and performance monitoring.

KEY PROJECTS

Flowspace — Real-Time Collaborative Task Management Platform

Technologies: FastAPI, Python, PostgreSQL (async), SQLAlchemy, Alembic, Celery, Redis, WebSockets, React 19, TanStack Query, Recharts, Tailwind CSS, Docker

- Built a full-stack multi-tenant SaaS platform (Jira-like) with FastAPI backend and React dashboard — organizations, workspaces, real-time task management, analytics, and webhook integrations.
- Implemented real-time sync via WebSocket rooms per workspace broadcasting task changes instantly to all connected clients, with TanStack Query cache invalidation on every event.
- Designed resilient webhook delivery with HMAC-SHA256 verification and exponential backoff retry (1 min → 5 min → 30 min → 2 hr → 8 hr) — delivery history logged per event.
- Built async backend with Celery background workers for email delivery, webhook dispatch, and scheduled reminders — Redis caching with workspace-scoped invalidation and PostgreSQL full-text search via GIN-indexed tsvector.

GitHub: <https://github.com/Nebenmor/flowspace> | **Status:** Production-ready

PayRoute — Cross-Border Payment Processing Service

Technologies: Node.js, Express.js, PostgreSQL, React, Vite, Tailwind CSS, Docker, Jest, Supertest

- Built full payment lifecycle (FX quote locking, balance debit, provider submission, webhook settlement) within atomic PostgreSQL transactions — containerized with Docker Compose.
- Designed double-entry bookkeeping ledger with SELECT FOR UPDATE overdraft prevention and a ledger_balance_check reconciliation view.
- Implemented idempotency middleware and HMAC-SHA256 webhook verification with raw-body-first event persistence to survive downstream crashes.
- Built React frontend with live FX preview, paginated transaction list with status filters, and ledger entry timeline view.

GitHub: <https://github.com/Nebenmor/PayRoute> | **Status:** Production-ready

JobSense — AI-Powered CV Analysis Tool (RAG Architecture)

Technologies: FastAPI, Python, Groq API (Llama 3.3 70B), PostgreSQL (async), SQLAlchemy, Alembic, pdfplumber, Pydantic v2, React 18, TypeScript, Vite, Vercel, Render

- Built a full-stack AI application on a RAG architecture: PDF extraction → keyword retrieval over 25 career-advice snippets → prompt augmentation → Groq LLM generation → Pydantic v2 validation → PostgreSQL persistence. Grounded suggestions in retrieved reference material, not general LLM knowledge.
- React 18 frontend (TypeScript, Vite) with animated SVG score ring, two-panel layout, PDF upload with validation, and past analyses history — custom CSS design system, no component library.
- Async FastAPI backend with structured LLM JSON output, retry logic on parse failure, in-memory PDF processing (never persisted), and 30-day auto-expiry on analysis records.
- Deployed end-to-end: Vercel (frontend) + Render (backend + managed PostgreSQL) with Alembic migrations auto-applied on every deploy.

EDUCATION & CERTIFICATIONS

AI for Developers

June 2025

Holberton School (ALX)

Relevant Coursework: Machine Learning Integration, AI-powered Development Tools, Natural Language Processing

Software Engineering

November 2024

Holberton School (ALX), San Francisco

Relevant Coursework: Data Structures & Algorithms, System Engineering, Web Development, Database Management, DevOps

Bachelor's Degree (B.Sc.) in Biochemistry

June 2019

University of Benin

Grade: 2:1 | **Skills:** Analytical thinking, Research methodology, Problem-solving

LANGUAGES

English: Fluent (Professional working proficiency)

KEY ACHIEVEMENTS

- Architected FlowSpace, a production full-stack multi-tenant SaaS platform with per-workspace WebSocket sync, Celery async workers, Redis caching, and resilient webhook delivery via exponential backoff retry — shipped end-to-end with React dashboard.
- Built PayRoute, a fintech-grade cross-border payment processor with double-entry bookkeeping, idempotency middleware, and HMAC-SHA256 webhook verification — zero double-crediting incidents.
- Improved system performance by 40% through strategic PostgreSQL indexing and query optimization while maintaining 95%+ test coverage across production environments.
- Contributed 80% of backend architecture for a production enterprise property management system serving property managers, residents, and maintenance teams — sub-200ms API response times.
- Built JobSense — a production RAG application using Groq API (Llama 3.3 70B), FastAPI, and React 18. Deployed live with structured LLM output extraction, Pydantic validation, and async PostgreSQL persistence.
